

## **Performance! Release**

**Oct 09, 2017**

### **Performance!Nxt Release 12.7191**

Flowserve is pleased to announce an interim release of Performance!Nxt 12.7191, the industry's foremost Control Valve Sizing, Selection and Project Management Software. Following are details about new product, features, enhancements implemented and issues resolved in this release.

#### **Issues resolved**

25922: Corrections have been made to Class IV-P/B seal validation logic, such that P/B Carbon Seal & Multi Seal designs are valid more often.

26014: The options under 'Weld Requirement' attribute have been modified to handle quotations being made with DIN standard.

25865: An issue in user interface for activating volume tank, has been fixed.

25904: For Limatorque Hydraulic(LH) series, a refresh issue on actuator grid has been fixed.

25951 & 25566: A modification has been made in the 'Import/Export' logic. Now records will export correctly even if data corruption is encountered in 'Measurement Units' table.

**Thanks to all who contributed to this release.**

**Please continue to report all issues in our tracker:**
